💡 PROJECTS

RESTful API for E-commerce Platform

Dec. 2024 – Present

Personal Project

- Built a scalable Node.js API with Express and a MongoDB database for user and product management.
- Improved API response times by optimizing queries, reducing latency to under 200ms.
- Streamlined developer onboarding by documenting API workflows using Postman, resulting in a 30% reduction in onboarding time.

Amazing Race Robot System

Aug. 2024 – Nov. 2024

Team Project

NUS

- Collaborated in a team of 4 to design and program an autonomous robot system using C, Arduino, and advanced algorithms.
- Designed and implemented PID control logic for wall tracking and dynamic steering, achieving a ± 3 cm deviation from walls.
- Implemented a K-Nearest Neighbors (KNN) algorithm to enhance color sensing efficiency by more than 50%, improving task accuracy.
- Integrated IR and ultrasonic sensors to adjust robot speed and direction, decreasing collision rates by 70% during testing.
